Fertility

hCG | LH

HCG is a hormone produced by the developing placenta quickly after fertilization, and can be detected as early as 7 to 10 days after conception.

The body produces a large amount

of LH which triggers the release of a ripened egg from the ovary. Detection of LH can help to find the right time of ovulation and peak fertility.

Product overview **Fertility**

hCG	D-HCG-U11	Urine	individually packed, 50 strips/box
	D-HCG-U12	Urine	25 tests/tube, 4 tubes/box
