Proteins

D-Dimer | Micro-Albumin

D-Dimer: D-dimer is a fibrin degradation product, a small protein fragment present in the blood after a blood clot is degraded by fibrinolysis. D-Dimer is used for diagnosis and exclusion of pulmonary embolism, disseminated intravascular coagulation (DIC) or deep vein thrombosis.

Micro-Albumin: The persistent appearance of small amounts of albumin in urine (micro-albuminuria) may be the first indicator of a renal dysfunction. For diabetic patients, positive results may be the first indicator of a diabetic nephropathy. Without therapy, the amount of released albumin will increase (macroalbuminuria) and renal insufficiency will occur.

DIMA GmbH has been a reliable partner for diagnostics throughout the world for many years.

We know the requirements of the various target groups inside out, and our development department is working constantly on new user-friendly procedures and rapid tests.

As one of the most significant manufacturers of rapid membrane tests,

we stand out from the crowd with our particularly high degree of flexibility and rapid action. We respond to the requirements of the market, and fulfill the special wishes of our customers.

Maintaining a constant dialogue with our customers enables us to respond reactively to problems and changes and to be able to offer products at all times of consistently high quality.

What do we stand for?

- DIMA® products show rapid results
 - DIMA® products are reliable
 - DIMA® products are easy to use
- rapid · reliable · easy DIAGNOSTICS**
